Loblolly Pine Seedlings

	VOLUME GAIN	SAWTIMBER POTENTIAL	TOTAL TONS/ACRE	ARBORGEN SCORE	\$/ACRE AT CLEARCUT
	15%	50%	190	60	\$2,348
					+\$500/acre
	20%	60%	208	71	\$2,851
					+\$1,100/acre
	25%	75%	216	82	\$3,454
					+\$1,500/acre
	30%	75%	229	96	\$3,808
					+\$1,700/acre
	35%	75%	238	104	\$4,068

Values based on internal ArborGen data and analyses. Per acre wood production and estimated value are based on regional averages for site index, silvicultural costs, and product prices. Stand projections are based on a one-thin regime with final harvest at age 31 years with initial stocking of 545 TPA. Harvest values are nominal including thinning revenue. Results are not guaranteed.

OP | BEST FOR RELIABLE PERFORMANCE AND BALANCED RETURN

An industry standard with two to four generations of genetic improvement, OP seedlings provide dependable growth and solid returns. They offer a strong foundation of volume gain, disease resistance, and stem form, producing good-quality standard trees that yield a mix of solid wood, pulp, and paper products.

OP PRO | BEST FOR IMPROVING PRODUCTIVITY WITHOUT ADDED COST

A step up in trait performance such as volume, disease resistance, and stem form, OP Pro seedlings represent the top 4% of open-pollinated families for combined performance. Naturally pollinated yet enhanced for consistency, these seedlings outperform traditional OP stock and are well-suited for applications where reliability and moderate gains are desired, including sawtimber stands with multiple thinnings.

MCP® | BEST FOR BOOSTING SAWTIMBER POTENTIAL AND OVERALL VALUE

Our Mass Control Pollination seedlings deliver a significant performance increase in key economic traits of loblolly pine. Through controlled cross-pollination, MCP® seedlings produce higher sawtimber potential, improved stem form, and stronger disease resistance, offering a clear step up in value and productivity over standard OP seedlings.

MCP® PRO | BEST FOR MAXIMIZING GROWTH, QUALITY, AND HARVEST RETURNS

This category of seedlings delivers exceptional combinations of volume gain, stem straightness, disease resistance, and reduced forking, providing superior sawtimber potential and more uniform, high-value trees. MCP® Pro seedlings offer faster growth, fewer defects, and a measurable increase in harvest revenue.

MCP® PRO+ | BEST FOR TOP-TIER INVESTORS SEEKING THE HIGHEST ROI

The very best genetics available anywhere, exclusive crosses developed through ArborGen's rigorous testing and breeding program. MCP® Pro+ seedlings deliver unmatched growth, quality, and sawtimber yield, ensuring maximum productivity and return per acre. These elite families represent ArborGen's top-performing genetics and are not available anywhere else.
